1. Bob replied he saw this picture for the first time
2. Bob replies he will go to the seaside.
3. Bob replied he had seen him last month.

A. You need not change your dress.
B. It will be better for you to stay the night.
C. Bill had arranged to have the wireless repaired.
D. A sleep would do me good.
E. When she awoke, she felt terrified.

One of them, Shorter was his name, was a man in the late thirties, small, but so well built as not to look short, slender, with large melancholy eyes and beautiful hands.

He loved being a pilot that was obvious to everyone. Sometimes, coming back from a flight, he stood near the customs office, looking at every passenger waiting for his baggage. His guests, youngsters, oldsters, businessmen, tourists…

Corrigé de l'exercice E:

In these circumstances, it might be better to wait

It might be a good thing to postpone it.

Perhaps it might be as well to look postpone it.

I would recommend (that) you read it carefully.

We could fill it in together, if you like.

If I may be permitted to remind you of the schedule.

If I might be permitted to suggest something.

Corrigé de l'exercice F :

The current system cannot allow us to meet the demands of the traffic. From the technical point of view, it could not cope with the increasing of traffic in the world. And then, this system has its limitation. It reaches its point of saturation.

The most obvious evidence of this saturation is congestion and delays. Some routes simply cannot accommodate any more traffic. Passengers and cargo are delayed in the air and on the ground. Delaying flights or better not? But an overloaded air transportation system brings economic paralysis as well. Tourists begin to think about more accessible destinations. Businesses begin to think about relocate. The costs of goods and services depending on air transportation go up, profits go down and in the end jobs are lost.

A new system uses digital communication networks to transmit an airplane's position along with its speed, altitude and direction of flight to air traffic management computers on the ground. Linking the traffic management computers together gives controllers an accurate reliable real time picture of what is going on in the air at any given moment. The flight plan of an airplane still on the ground can also be entered into the system, which means that potential air space conflicts can be spotted and resolved even before it leaves the gate.

Data and voice links between airlines and controllers and airline operation facilities also will be digital and satellite based. The ability to communicate with any airplane at any time means weather information; route changes, equipment problems or air space conflicts can be resolved quickly and safely. The extreme accuracy of the navigation and surveillance system and the total reliability of the communication system means that aircraft don't have to be confined on established or published air routes. Airlines can vary their routes to fly the shortest distances or to take advantage of favourable winds or avoid areas of bad weather. Spacing between the planes on the same route can be reduced; more planes can be flown on each route which means more passengers and more freight can be accommodated on each route. . .

Corrigé de l'exercice G :

I hope today will be an ordinary day. Yesterday was a mean one. A French passenger who **had been waiting** *for four hours before boarding ~~had~~ complained about aching legs. The kid sitting next to him spilled coke all over the seat because he had his meal when he* **was watching** *a movie. A young mother on the other side of the aisle, who* **had never seen** *him before,* **talked** *to him as if he were her son, what made the situation even worse. I* **had** *a close watch on her. Ok, since my childhood, I* **had wanted** *to become a flight attendant, but this time, after three hours of flight, I wondered – firstly – if it* **had** *been a nice choice, and – secondly - how long we had already been on our way. I wondered when the captain* **would** *eventually announce the beginning of the descent. At this very moment, my purser ~~had~~ updated me that due to adverse weather conditions in Berlin, we* **would be diverting** *to Amsterdam. Great. Five minutes later, her voice pleasantly* **transmitted** *the message over the public address system: "Ladies and gentlemen, due to adverse weather conditions in Berlin, we* **will** *divert to Amsterdam. This lengthens our journey time by approximately ten minutes. Transfer arrangements* **will** *be made to return passengers to Berlin. Thank you for your understanding."*
15 minutes later, we were about to land~~ing~~. Most of the passengers, tired and hungry, **were watching** *eagerly the flickering airport lights when the plane touched down.*
